

STALWART

Exhausting System SES-402

Features

- The whole machine adopts mould production, the appearance is simple and generous
- Using translucent neutralization unit design, easy to observe and easy to replace
- The suction intensity and negative pressure can be adjusted in real time to avoid acid gas overflow and evacuation
- Anti-corrosion vacuum pump, with low noise, large suction, reducing exhaust gas emissions, energy saving and environmental protection
- The triple filtration system of water filtration, alkali neutralization and activated carbon filtration has excellent neutralization and adsorption effects, and can neutralize acid mist and reaction gas generated during Kjeldahl digestion or other processes
- Using PTFE corrosion-resistant pipeline design, increasing the overall life of the instrument

Specification

Model	SES-402
Pump suction capacity	40L/min
Power consumption	320W
System suction capacity	50-400mBar
Power	220 VAC±10% 50HZ
Weight	40Kg
